Type of Forklifts & Buyer Guide

Standard Forklift:

These are the large & sturdy forklift trucks that are used in warehouses. Standard trucks can lift weights that range between 3,000 to 4,000 pounds. The fork can lift materials up to a height of 20 feet. It is available in diesel, petrol, gas &

Reach Truck:

These are narrow-aisled forklifts that usually run on DC power. They are designed for pallet storage and can lift loads up to a height of 40 feet. If you are looking to lift and unload weights quickly over long distances, reach truck is not the one for you.

Order Picker:

These are very narrow-aisled trucks that are useful for moving racked loads which are smaller than the pallet size. They can lift both the load as well as the truck operator to a height of 40 feet and it is operated by battery power only.

Motorized Pallet Trucks:

These trucks are also known as walkies, riders or walkie riders. These vehicles derive their names from the fact that the operator does not have to sit inside the vehicle to operate it. In fact, he walks along the side of the truck as it moves the load & it works on rechargeable batteries.

Swing Mast Trucks:

These are vehicles with a narrow aisle. They are similar in appearance to standard trucks. However, their masts can swing up to 90 degrees in one direction only and these forklifts are operated by battery power.

Turret Trucks:

Turret trucks also have very a narrow aisle. Like the order selector, they can lift both the load as well as the operator. However, in addition to that, turret trucks can swing the forks 90 degree on either side. It is operated by battery power.
